

Desired Outcomes Guide

2018-19 Grant Cycle

The following charts offer a guide for tracking progress on the overall desired outcomes for the 2018-19 grant-funded projects. The second column represents how we will expect the information on the six-month progress report and the final report. Komen Colorado will provide further direction before each report is due.

When the information is needed in the narrative section, Komen Colorado will be looking for a brief description on how your organization worked to meet the desired outcome, tracked progress and provided/confirmed the outcome. Komen Colorado will also accept a separate attachment to each report to describe the information, if needed.

Komen HQ developed a new report tracking tool to assist in some of the required data capture and analysis. Please see details in the orientation email for more information.

Priority One		
Desired Outcome	How We Need Information	Tracking/Resources
Breast cancer screenings, based on individual risk	Number of procedures: Project Summary page Description of individual risk: Narrative	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
At least 45% of screening completions are for rarely/never screened individuals	Project Summary page	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
For abnormal screenings, definitive resolution within 60 days	Breast Cancer Follow-up and Diagnoses tables	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
Treatment: Removal of barriers for adherence to medically-recommended treatment plan	Narrative or Project Summary page (if have a separate objective)	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
Treatment: Receipt of survivorship plan, if patient completes treatment in grant cycle	Narrative or Project Summary page (if have a separate objective)	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators

Desired Outcomes Guide

2018-19 Grant Cycle

Priority Two		
Desired Outcome	How We Need Information	Tracking/Resources
Completed mammograms	Project Summary Page	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
At least 45% of screening completions are for rarely/never screened individuals	Project Summary page	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
Individuals connected to PCP, if needed	Narrative	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
Increased understanding of breast cancer risk factors and screening guidelines based on individual risk	Narrative- will need to provide data on what the education intervention pre- and post-evaluation tools demonstrate (i.e. % of those receiving education who had an increase in knowledge)	Pre- and post-evaluation tools
Increased understanding of how to obtain and utilize health insurance	Narrative- will need to provide data on what the education intervention pre- and post-evaluation tools demonstrate (i.e. % of those receiving education who had an increase in knowledge)	Pre- and post-evaluation tools
Increased understanding of insurance coverage for preventative services	Narrative- will need to provide data on what the education intervention pre- and post-evaluation tools demonstrate (i.e. % of those receiving education who had an increase in knowledge)	Pre- and post-evaluation tools
Identify and mitigate barriers to completing mammogram	Narrative	Electronic records (if system allows), Excel tracking, Patient charts/Patient navigators
